Waynesboro
Ambulance
Squad

at

Waynesboro,
Pennsylvania

Project Type:

Four-bay ambulance squad with administrative offices, and community center.

Square Footage:

17,154 s.f.

Project Description:

This project's design was to develop a four-bay ambulance squad with an emergency dispatch center. The building featured administrative offices, training classrooms, male and female living quarters to accommodate 12 emergency medical technicians and a community center with adjacent commercial kitchen.

Special Design Considerations:

Owner had several objectives: first, the structure had to be designed to minimize long term maintenance through careful material selection; second, the layout had to be designed to expedite emergency response time within the building, and finally, the design needed to provide income generation for building operating costs. The latter item was achieved through constructing a community center to accommodate 300 people.

Participants:

Newcomer Associates
R. Lee Royer and Associates
GRC General Contractors
